DETAILED ACTION

Allowable Subject Matter

1. Claims 1-25 are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The closest prior art of record issued to Hippenlainen (US Patent 6,229,802) discloses a technique for packet switched data transmission between two network nodes, especially between a telecommunication network and a base station where calls is forwarded as data packets at even intervals (col. 1/lines 8-14 & 50-65). However, this closest prior art fails to teach or suggest a further step of introducing a controller electrically connecting two network nodes, wherein the controller is dynamically configurable in a manner such that any single communication device of the mentioned group is capable of sending packet data to other communication devices of the group, for example, using push-to-talk communication devices and with via a first channel from a transmitter to a controller and via a second channel from the controller to a receiver, as recited in claims 1, 11 and 25.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2684

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Combs et al (US Patent 5,365,512) disclose multisite trunked RF communication system with reliable control messaging network.

Kaye (US Patent 5,694,393) discloses a communication system with packet switching method.

Teel et al (US Patent 5,392,278) disclose a distribution multisite system architecture.

Nguyen (US Patent 6,021,326) discloses trunked multi-site dispatch network for trunking radios.

Rao (US Patent 6,272,334) discloses call management for a multi-site mobile radio dispatch network.
